## SUMMARY

A software engineer with professional development experience across mobile, web, and business automation in Japan, backed by a Web and Mobile App Development Diploma from a Canadian college. I currently build Android (Jetpack Compose) and iOS (Swift) applications along with backend processing and system integrations in Python, PHP, and SQL. Earlier, I led VBA automation projects that reduced manual work across a department. A native Japanese speaker with professional English (TOEIC 905), gained through two years of study and work in Vancouver.

## PROJECTS

**NoirRose - Blogging Platform** ( Preview / GitHub )
Crafted with MERN Stack, provides seamless blog reading and management. Features include user authentication and Cloudinary image hosting.

**Technical Specifications:** MongoDB, Express, React, Node.js, bcryptjs, jsonwebtoken, mongoose, multer, nodemailer, Cloudinary.

**Manga-Mart - E-commerce** ( Preview / GitHub )
A Next.js-based e-commerce site with modern features like Google login, a favorites system, and a cart function, with a modernized UI/UX.

**Technical Specifications:** React, Next.js, Google Auth, Firebase, TypeScript, Tailwind.

**Jackie - Project Platform** ( Preview / GitHub )
A platform for showcasing and discovering design projects. Enables user authentication, project management, and exploration.

**Technical Specifications:** Next.js, TypeScript, Cloudinary, Grafbase, NextAuth.js, Google Cloud, Tailwind CSS.

**Web-based Todo App** ( Preview / GitHub )
A task manager with a user-friendly design. Enables CRUD operations, state management via Redux Toolkit, and persistence in Local Storage.

**Technical Specifications:** React, Redux Toolkit, Local Storage.

## EMPLOYMENT

Nov 2025 - Present
**Systems Engineer**

GROOVER CORPORATION
